

Jimmy Tran

Full Stack Developer

Email: jimmytran61900@gmail.com | Location: North York, Ontario

TECHNICAL SKILLS

Languages: Python, C/C++, JavaScript, TypeScript, HTML, CSS, SQL

Frameworks & Libraries: React, Node.js, Next.js, REST APIs, Bootstrap, OpenGL, MongoDB

Cloud & DevOps: AWS (Cognito, EC2, ECS, S3, DynamoDB), Docker, GitHub Actions, CI/CD

Tools & Environments: Git, UNIX/Linux, Hygraph, Agile/Scrum, Testing (Jest, Hurl), Google Apps Script, Unreal Engine, Figma

EDUCATION

Seneca Polytechnic, Toronto, ON

Bachelor of Technology, Software Development (GPA: 4.0) | January 2021 – December 2025

York University, Toronto, ON

Bachelor of Science, Chemistry (Honours) | September 2016 – February 2023

PROFESSIONAL EXPERIENCE

LetsStopAids, Toronto — Full Stack Developer Intern | *January 2025 – December 2025*

- Developed web pages with React components and JavaScript animations including an interactive map
- Integrated Hygraph as a CMS and database to dynamically manage content across React components in web applications
- Created automated workflows for receipt generation using Google Sheets (Apps Script) and Google Docs templates
- Designed responsive web and mobile interfaces with Figma and implemented them into functional front-end components
- Debugged and maintained Slack plugins used for tracking volunteer hours
- Built registration forms using state management libraries in React

Sciqwest, Toronto — Volunteer Instructor | *June 2019 to August 2019*

- Delivered engaging, hands-on workshops in programming and engineering for elementary and high school students
- Assisted in preparing educational materials, organizing sessions, and supporting team-led workshops
- Fostered STEM interest through interactive learning and collaboration

PROJECTS

Bookwise Invoicing (<https://bookwise-invoices.vercel.app/>) — *January 2026*

- Developed an accounting app built with NextJS, Tailwind, and PostgreSQL to create an invoice dashboard
- Optimized the app using server-side and client-side components with React and TypeScript
- Created functionalities for users to search, create, update, and delete invoices

Sports Motion Detection App with AI & computer vision — *August 2025*

- Built a computer vision app with Python and CNN models that detects motion in video clips by analyzing frame differences
- Implemented bounding box detection to distinguish between players and a CV2 viewport that simulates a moving camera

Fragments Microservice Cloud App — *August 2025*

- Built a microservice in AWS enabling users to upload and manage data fragments in multiple formats with CRUD functionality
- Implemented secure user authentication and authorization using Amazon Cognito
- Designed and deployed REST APIs integrated with a web frontend using HTML, CSS, and JavaScript
- Automated CI/CD pipelines with GitHub Actions, including unit and integration testing with Jest and Hurl
- Deployed containers via Docker, with automated image pushes to DockerHub and AWS ECS

EzTicket Web App — *May 2024*

- Developed a full-stack web app in React with Bootstrap for UI components and MongoDB for the database
- Applied Agile methodologies such as Scrum and used JIRA for sprint planning, issue tracking, and team collaboration
